PROFESSIONAL SUMMARY

Software Developer and ERP/HMIS Specialist with 3+ years of professional experience in software development, enterprise system customization, implementation, technical support, training, and team coordination. Experienced in developing and customizing ERP and HMIS solutions, translating business requirements into practical software solutions, and supporting organizations throughout the full system implementation lifecycle. Proven track record of deploying enterprise systems across 6+ general hospitals and 1 medical center, implementing ERP solutions for a construction organization, and training 200+ users and professionals. Strong background in Python, JavaScript, SQL, ERPNext/Frappe, database systems, system troubleshooting, and full-cycle implementation.

PROFESSIONAL EXPERIENCE

Infranet Technology PLC — Addis Ababa, Ethiopia

Software Developer | ERP Analyst | Trainer | Team Lead | August 2023 – Present

- Develop and customize ERP and HMIS modules according to organizational workflows, operational requirements, and business processes.
- Analyze user and business requirements and translate them into practical software solutions.
- Customize ERPNext/Frappe functionality, including workflows, reports, business logic, database operations, and system configurations.
- Develop and maintain software features using Python, JavaScript, SQL, and related web technologies.
- Provide technical support, troubleshooting, system maintenance, and performance optimization for deployed systems.
- Participate in complete implementation cycles, including requirements gathering, system configuration, customization, testing, deployment, training, and post-go-live support.
- Develop reports and data-driven solutions to support operational and management decision-making.
- Work closely with healthcare and business users to identify process gaps and improve system workflows.
- Prepare technical documentation, user guides, implementation documentation, and training materials.
- Conduct hands-on training sessions and workshops for end users and organizational teams.
- Coordinate technical activities and guide team members during system deployment and support.
- Provide on-site and remote technical assistance to resolve application, database, server, and user-related issues.

Key Achievements

- Successfully deployed and supported HMIS and ERP systems across 6+ general hospitals and 1 medical center.
- Implemented and customized an ERP solution for a construction company, supporting project tracking, financial control, and resource management.
- Led full-cycle implementation activities from requirements gathering through configuration, customization, deployment, user training, and post-implementation support.
- Successfully trained 200+ users and professionals across multiple organizations.
- Contributed to improving system adoption by combining technical implementation with structured user training and documentation.
- Supported organizations in transitioning from manual or fragmented processes toward integrated digital workflows.

TECHNICAL SKILLS

Programming Languages: Python; JavaScript / TypeScript; C#

Web & Application Development: React; Angular; Node.js; HTML5; CSS3; REST APIs; Full-Stack Web Development

ERP & Enterprise Systems: ERPNext; Frappe Framework; ERP Customization; ERP Workflows; ERP Reports; Business Process Automation; Enterprise System Implementation

Healthcare Information Systems: HMIS; Hospital Information Systems; Healthcare Workflow Implementation; Clinical & Administrative System Support; Hospital System Deployment

Databases: MariaDB / MySQL; PostgreSQL; Microsoft SQL Server; MongoDB; SQL Query Development; Database Administration & Optimization

DevOps, Servers & Infrastructure: Ubuntu; Windows Server; Git; Application Deployment; Server Troubleshooting; System Monitoring; Background Jobs & Scheduled Tasks

AI & Productivity: Generative AI-assisted software development; AI-assisted code analysis and debugging; Workflow automation; AI-assisted documentation and technical research; Antigravity,ChatGPT; Gemini; Copilot; Claude; DeepSeek; Grok

SELECTED PROJECT EXPERIENCE

ERP & HMIS Implementation — Software Developer / ERP Analyst / Implementation Specialist

- Developed and customized enterprise modules according to organizational requirements.
- Configured workflows, reports, permissions, business rules, and system processes.
- Supported deployment, testing, data migration, training, and post-go-live activities.
- Implemented solutions across multiple healthcare organizations.

Impact: Deployment and support across 6+ general hospitals and 1 medical center.

Construction ERP Implementation — ERP Developer / Implementation Specialist

- Customized ERP functionality to support construction business processes.
- Supported project tracking, financial management, resource management, and operational workflows.
- Participated in requirements analysis, configuration, customization, testing, deployment, and user training.

Hotel Management System — Full-Stack Developer

Currently developing a modern Hotel Management System focused on digitizing hotel operations and providing an integrated platform for managing hotel business workflows.

Technology focus: React, TypeScript, PostgreSQL, Tailwind CSS, Progressive Web Application architecture.

Property Management System (PMS) — Full-Stack Developer Developing a modular property management platform designed to connect property operations, tenants, leases, financial transactions, and administration in one integrated system.

- Designed and implemented property management workflows, including properties and their building, floor, and unit structure.
- Built tenant and lease management features to support tenant records and rental agreements.
- Developed invoice management and integrated payment-processing workflows, with support for configurable company and tax/service-charge settings.
- Implemented role-based access control with roles, permissions, user-role assignments, and audit logging.
- Built administrative interfaces using Angular and developed backend APIs and database-backed services. Technology focus: Angular, TypeScript, Node.js, REST APIs, PostgreSQL, Prisma ORM, role-based access control (RBAC), and modular monolith architecture.

EDUCATION

CPU Business and Information Technology College — Bachelor of Science in Computer Science, 2020 – 2023

TVET — Hardware & Networking Service — Diploma in Hardware and Networking Service, 2017 – 2019

LANGUAGES

Amharic — Native | English — Intermediate
